

## Usage / Deployment Instructions

**Step 1:** Use the browser to access the application at <http://<instance ip address>> replace <instance ip address> with the actual IP address of the running instance.

**Note:** You will get the Instance IP Address as shown in the screenshot below:

i-bp1bf2o15s6kh3qvfvld		Hangzhou	47.110.62.189(Internet)	Running VPC	1 vCPU 1 GB (I/O Optimized)	Pay-As-You-Go	Manage   Connect
zencart-21112018		Zone B	172.16.143.85(Private)		ecs.n1.tiny	November 21, 2018, 12:03	Change Instance Type   More
					5Mbps (Peak Value)	Create	

**Step 2:** Hit the public ip on the browser as follows:

Public ip/zencart

## Hello. Thank you for loading Zen Cart®.

**You are seeing this page for one or more reasons:**

1. This is your **first time using Zen Cart®** and you haven't yet completed the normal Installation procedure. If this is the case for you, [Click here](#) to begin installation.
2. Your `/includes/configure.php` and/or `/admin/includes/configure.php` file contains invalid *path information* and/or invalid *database-connection information*.  
If you recently edited your `configure.php` files for any reason, or maybe moved your site to a different folder or different server, then you'll need to review and update all your settings to the correct values for your server.  
Additionally, if the permissions have been changed on your `configure.php` files, then maybe they're too low for the files to be read.  
Or the `configure.php` files could be missing altogether.  
Or your hosting company has recently changed the server's PHP configuration (or upgraded its version) then they may have broken things as well.  
See the [Online FAQ and Tutorials](#) area on the Zen Cart® website for assistance.
3. Additional **\*IMPORTANT\*** Details: `includes/configure.php` file contents invalid. ie: `DIR_FS_CATALOG` not valid or not set

**To begin installation ...**

1. The [Installation Documentation](#) can be read by clicking here: [Documentation](#)
2. Run `zc_install/index.php` via your browser.
3. The [Online FAQ and Tutorials](#) area on the Zen Cart® website will also be of value if you run into difficulties.

TIP: For some errors and warnings below, more information may be available by clicking on the error/warning title.

## Some other problems

For maximum security and compatibility you should be using PHP 7.1 or newer. This installer can proceed, but this is just letting you know that your site will not be PCI Compliant when running out-of-date software.

Problems with the CURL extension - PHP is reporting that CURL is not present.  
Could not use CURL to contact a live server

XML Extension in PHP is not enabled

PRO TIP: If possible you should already have installed an SSL certificate, and run the installer using https://

**Step 3:** Enter the details as follows and enjoy your application.

# Database Setup

NOTE: You must create your MySQL database and corresponding Database user, and grant permissions to that user, before proceeding on this page. Click the left-column titles below for help with understanding each component.

## Basic Settings

Database Host:	<input type="text" value="localhost"/>
Database User:	<input type="text" value="root"/>
Database Password:	<input type="password" value="****"/>
Database Name:	<input type="text" value="zencart"/>

## Demo Data

[Load Demo Data](#)  Load demo data into this database?

## Advanced Settings

Database Character Set:	<input type="text" value="UTF8 (default setting)"/>
Store Prefix:	<input type="text" value="usually best left blank, or use zen_"/>
SQL Cache Method:	<input type="text" value="No SQL Caching"/>

# Admin Setup

TIP: The field titles are clickable help links which explain what each field means.

## Admin User Settings

Admin Superuser Name:

je: bill

*A unique admin username is required*

Admin Superuser Email:

ie: my\_email@example.com

Retype email:

ie: my\_email@example.com

**REMEMBER THIS!!:** Below is your initial temporary password for your Admin Superuser Account. Please ensure you make a note of it.

Admin password:
